CABLE TRAY ROLLER

Our Cable Tray Rollers are designed to serve a variety of applications when installation of cable runs is required over medium to long distances.

As a standard unit they are supplied with a 140mm alloy bearing roller that will accommodate cable diameter up to 120mm comfortably and sustain an individual load rating of 200kg.

The flat square base is enhanced with 3 rows of mounting holes making it suitable for attaching to any pattern of cable tray or cable ladder if required. You can purchase our fixing arms designed to suit or make your own arrangements, in some instances you are able to attach the cable tray rollers direct to your cable tray without the need for further accessories other than nuts and bolts. PVC bearing rollers are available if required in lieu of Alloy.

This roller may also be used in situations over flat ground or trench work where the ground is flat and even.

In the event of excess wear and tear to your roller you can order replacement rollers separately.

DIMENSIONS: 260mm (L) x 210mm (W) x 130mm (H)

WEIGHT: 3.5kg with alloy roller
