WEC2600C 240V CAPSTAN WINCH

The WEC2600C electric (240V 2.2kW 100% duty cycle) capstan winch has a maintenance free sealed gear box, and outer steel sleeve on the aluminium capstan for better grip which reduces operator fatigue and offers wear resistance to the capstan.

The hauling capacity of this unit is 2.6tonne and it will haul at approx 6 metres per minute. Either 3 strand poly rope (aquatec) or braided (spectra) rope is suitable for use on the capstan.

The unit can be secured by using the 4 x supplied anchor boltholes or by using the supplied draw bar to attach to your vehicles tow bar. The unit is also supplied with heavy duty “wheel barrow” style wheels and extension handle to assist in manoeuvring the unit into position easily. If need be the unit can be lifted via the supplied lifting point.

The unit illustrated below also shows an operator safety screen, which can be ordered separately. Alternatively a rope diverter can be fitted which allows the operator to stand side on to the unit when in operation.

Dimensions ; Length 1200mm , Width 630mm , Height 610mm

Capstan ; 140mm

Power lead ; 5 metres x 10amp heavy duty flexible cord.

Weight ; 179kg

Warranty; 12 months
