Conduit Seals

We do a range of conduit seals from 25mm through to 150mm. There are mainly two types, the disc version is used if you are using a compressor with blowing gun attachment. These are attached to the threaded head section of your blowing gun. By tensioning the wingnut you will compress the centre rubber section in order to ensure a snug fit in the conduit opening. These seals are available in sizes 40mm through to 150mm.

The cone version is designed to fit various conduit sizes. These are available to suit conduits ranging from 25mm through to 150mm. These cones are normally fitted to a "Y" piece section that is provided in your 240V blowing kit. They may also be fitted to your compressor blowing gun when an adaptor is added.

We can also provide an occupied conduit adaptor for conduits 80mm through to 100mm. These are used predominantly in the communications conduit sector but if your electrical conduit falls into that size range they can be utilised. These adaptors are fitted to your compressor air hose and come complete with a heavy duty toggle style on/off lever.

Conduit Blowing Cones

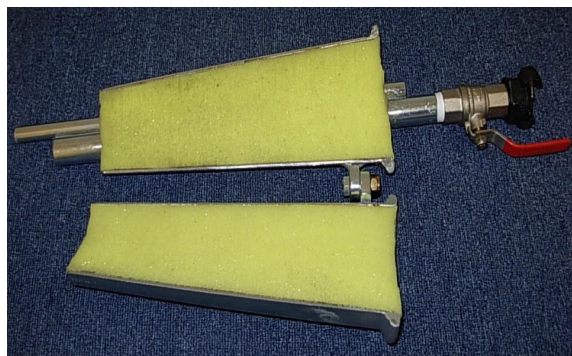

Cone Fitted to Hose

Cone fitted to Compressor Blowing Gun

Seal Fitted to Compressor Blowing Gun

Occupied Conduit Seal 80 – 100mm
