

MANHOLE ROLLER GUIDES

Manhole Roller Guides are designed to assist in the laying of cable when entering a manhole from ground level.

The Roller Guides are fitted to a right angle base plate. When positioned at the desired entry level of the manhole, they will sit independently in place but if need be can be anchored via the extra mounting holes provided in the base plate.

The Manhole Roller Guides are made in single or double fixed roller versions, or a triple roller version that is hinged, which offers a pivoting action if required by backing off the tension on the centre bolt.

The right angle mounting plate is constructed of 5mm steel and all versions are supplied with 148mm alloy bearing rollers. Replacement alloy bearing rollers can be ordered if required. Bearing rollers rated to 200kg each.

CODE	DESCRIPTION	WEIGHT
MRG140	SINGLE MANHOLE ROLLER GUIDE	6.5KG
MRG140/2	DOUBLE MANHOLE ROLLER GUIDE	8.5KG
MRG140/3	TRIPLE MANHOLE ROLLER GUIDE	12.7KG
