### **TS100 CABLE FAULT FINDER**

The TS100 Cable faultfinder is a portable handheld device used by installers, repair technicians and other authorised personnel for locating problems on installed cable pairs and managing cable inventory.

The advanced design features of the TS100 make the unit easy to use. The unit is able to test all common pairs, requires only a single button operation and will test up to 900 metres of cable length, depending on cable type. The accuracy is to 600mm on short cable runs and accurate to 1.5metres on cable runs up to 60 metres.

Included in the features of the TS100 is a bright LED display, which will capture up to 4 readings per second. An audible indication of any shorted wires and external voltage interference greater than 15V is also an automatic feature. The input is protected to 250V and the components are protected against damage from moisture.

Average life expectancy of the battery will provide approx 50 hours of usage, a low battery indicator and intelligent auto-off sensor also protects the user from unexpected power outage. The TS100 runs off 4 x AA batteries (supplied) and the unit casing is constructed of ABS high strength plastic. A soft carry case is also supplied with your unit, as is a set of the required attachment leads, and a full information and users guide. The limited warranty period is 18months, further particulars of which are available in the manual.
